

TRAVERTINE

LEEDTM is a set of green building standards developed by US Green Building Council. There are multiples categories with point available for various green building techniques and material usage. By accumulating points, projects can qualify for varying levels of LEED Certification. Points are scored by satisfying the requirements of each credit within a given category.

COTTO products are manufactured with recycled content, as well as no VOC content, and can help projects gain LEEDTM Green Building credit in the following areas:

WQ - Indoor Environmental Quality

Low Emitting Material

No VOCs emission

EA – Energy & Atmosphere

Energy Performance

1.0 – 1.4 W/mK

Percentage of recycled material

TRAVERTINE BEIGE

= 8.03%

TRAVERTINE SILVER

= 8.03%

Note: Product is not reviewed or certified under LEED Green Building Rating System as LEED credit requirements cover the performance of materials in aggregate not the individual products or brands. Determination of product that attributes for LEED certification of a building project is the responsibility of the LEED applicant.
